SACHIT GHIMIRE

FULL STACK DEVELOPER

Kathmandu, Nepal · 9845913643 · sachitghimire2@gmail.com · linkedin.com/in/sachit-ghimire-0b77651b3

SUMMARY

Full stack developer with a year of production experience building and running the web platform for Lama Group, a Texas-based fuel and convenience retail company I work with remotely from Kathmandu. Most of my work is backend: Postgres schema design, authentication, and the internal APIs the business runs on.

Recent work: signed-JWT single sign-on linking the staff portal to the HR system across separate databases and infrastructure, and six secured REST endpoints that replaced manual HR lookups. I design and build the front end too, which removes a handoff.

TECHNICAL SKILLS

Backend	Node.js, Express, REST API design, Prisma, SQL schema design, scheduled jobs (node-cron)
Databases	PostgreSQL (Neon, Supabase), SQLite
Auth & Security	JWT (jose), bcrypt, Supabase Auth, SSO, role-based access control, shared-secret service auth
Infrastructure	Vercel, Cloudflare Workers (OpenNext), AWS S3, GitHub Actions
Frontend	React 18/19, Next.js 13–16 (App Router), TypeScript, Tailwind CSS v3/v4, Framer Motion, GSAP
Design	Figma, Photoshop, design systems, design tokens, responsive and mobile-first layout

EXPERIENCE

Full Stack Developer — Lama Group (formerly QuickTrack INC)

Jul 2025 – Present · Texas, USA — Remote

Sole developer on the group's web platform, covering its convenience store, fuel, and franchise brands plus the internal staff and HR systems. Around 160 commits across nine repositories, working remotely across a 12-hour time difference.

INTERNAL PLATFORM

- **Staff Portal** — Next.js, Neon Postgres, Prisma. Tool registry, department and user management, and an assistant that answers operational questions in plain language.
- **Portal ↔ HR single sign-on** — signed JWTs let staff launch the HR system already authenticated. Two codebases, two GitHub organisations, two Vercel teams, one shared secret.
- **HR system automation** — six internal REST endpoints (employee lookup, PTO balance, clocked-in status, pending time off, roster summary, health) secured by shared-secret auth, plus the portal-side connector that consumes them. Now in daily use, replacing manual HR lookups.
- **Employee Management & Compliance System** — Next.js and Express with Supabase, AWS S3 document storage, and scheduled compliance checks via node-cron.
- Diagnosed and fixed a production outage caused by an auth migration deployed without its environment variables. Reverted the merge, restored service, and wrote the environment checklist that prevents a repeat.
- Ran a five-person production pilot with a written test handout and QA checklist.

CUSTOMER-FACING SITES

- **Lama Convenience** — website for the group's convenience store chain. Next.js 16 / React 19, 25+ routes covering products, stores, rewards, franchise, careers, and media. Admin panel behind JWT auth with a TipTap rich-text editor and drag-and-drop layout ordering.
- **Lama Fuel** — website for the fuel retail arm. Next.js and Supabase, with dynamic brand and product pages.
- **QuickTrack Franchise** — franchise recruitment site with Leaflet store-locator maps.
- Wrote the launch, environment, and database documentation the team deploys against.

Graphic Designer — QueenslandRoyal

Nov 2024 – Jul 2025 · Australia — Remote

Designed social media graphics for an Australian cricket club — player features and match graphics — produced remotely from Nepal against a recurring fixture schedule.

UI/UX Intern — Nectar Digit

Jan 2024 – Mar 2024

Designed client website interfaces in Figma, working through layout, hierarchy, and prototyping.

Social Media Manager — Utility Nepal

Jun 2023 – Nov 2023

Ran the company's social presence and produced its graphics in Figma and Canva.

Digital Marketing Intern — Deerwalk Compware

Feb 2023 – May 2023

Wrote and produced marketing content.

SELECTED PROJECTS

EduYatra — PTE and IELTS exam-prep platform for Nepali students. Next.js 15, Supabase auth, Framer Motion and GSAP. Built the design system from tokens up: a custom mascot asset pipeline with an automated image-optimisation budget gate, a component library, and a rebuilt marketing homepage.

Unitech Hydropower — Corporate site for a run-of-river hydropower company. Next.js 16, Tailwind v4, deployed to Cloudflare Workers via OpenNext. Designed and implemented a tokenised colour system, replacing 164 scattered hex literals with a single palette.

JUWA — Mobile-first arcade game in React 19, Phaser 4, Zustand, and Howler.js. Built to learn game-loop and canvas rendering.
